

## Contact Lens Agreement

At Baxter Eye Care, we carry the latest in contact lens technology and are dedicated to providing you with the best vision and comfort there is to offer. Because contact lenses are a medical device, a contact lens evaluation must be performed annually in order to provide a contact lens prescription. This is a separate service from the comprehensive exam, and includes:

- Discussing your visual needs and the contact lens options available to meet them
- Evaluating the health of the eye specifically as it relates to contact lens wear
- Maintaining an extensive in-office supply of diagnostic lenses and/or ordering custom lenses to ensure optimal fit and vision
- Providing follow up visits at no charge for 1 year to make changes to the fit or prescription based on your changing needs
- Offering a 20% discount on glasses and sunglasses\* to ensure all visual needs are met  
(\*must include frame & lenses; not applicable with vision plan benefits)

Once your doctor determines your contact lens prescription is finalized, it has two parts:

1. It is valid for 1 year from the date the prescription is finalized
2. It is valid for 1 year supply of lenses (amount variable depending on discard schedule)

Contact Lens Evaluation fees are due at the time of service and are non-refundable. These fees range from \$156-\$196 depending on the complexity of your prescription needs, as well as your history with contact lenses.

We want all of our contact lens wearers to be healthy and comfortable in their contact lenses for many years. Habits for successful contact lens wear include:

- Discarding your lenses as directed by your doctor.
- If applicable, storing lenses in approved disinfectant solution. Never reuse or refill on top of old solution. Never use tap water on your lenses and always dry your hands after washing.
- Removing your lenses 1-2 hours before going to bed and never sleeping in them. This helps prevent complications of contact lens overwear which can include:
  - Discomfort and/or itching
  - Corneal infection/inflammation, ulceration, and potential scarring which can lead to a permanent loss of vision
  - Inability to wear contact lenses for more than a few hours, or in some cases, at all
- Having a pair of back-up glasses with your current prescription

Remove lenses immediately and call our office to schedule a medical visit if:

- You develop unusual pain or redness, or unusually cloudy vision
- You experience a decrease in vision that doesn't clear up
- You suspect something is wrong
